

Tannerite® Brand Binary Rifle Target Safety Information

- Treat all binary targets with respect. **Misuse of binary targets could result in serious injuries or death.**
- To ensure a homogeneous composition, be sure to use the mixing container that's included with every Tannerite® Brand Binary Rifle Target purchase. **Do NOT mix Tannerite® Brand Targets and Color Powder together** – they are to be kept separate.
- Place 2 lb targets 200 yards down range before shooting. Place 1 lb targets 100 yards down range before shooting.
- Remember that the legal use of these targets is as a shot indicator only.
- Mix the targets at the range and shoot them immediately. Do not transport, store, or sell the mixed composition unless you have the appropriate explosives endorsements.
- Always wear ear and eye protection.
- Be sure to use in a remote area only and respect the adjoining property owner's right to tranquility.
- Tannerite® patented targets were specifically designed using a proprietary blend of the highest quality components to generate a shock-wave induced detonation that should not start a fire themselves, however, consumers are warned that various external factors, such as improper use, improper mixing, bullet sparks, the addition of other chemicals, and other environmental conditions can result in fires.
- As always, respect local noise ordinances and always use Tannerite® Brand Binary Rifle Targets as directed by the manufacturer
- **Never place these targets inside, on top of, or under any surface that could produce shrapnel or within another object**
